

FARO® Introduces SCENE 7.0 With Real Time, On-Site Registration

July 25, 2017

Seamless Integration of FARO Focus^S Series Scanner 3D Point Clouds

LAKE MARY, Fla., July 25, 2017 /PRNewswire/ -- **FARO® (NASDAQ: FARO)**, the world's most trusted source for 3D measurement and imaging solutions for factory metrology, construction BIM/CIM, product design, public safety-forensics, and 3D solutions, announces the availability of the FARO® SCENE 7.0 software platform (www.faro.com/scene). SCENE 7.0 includes the high quality, high value functionality offered by its predecessor, SCENE 6.2, such as automatic object recognition, scan registration and position, and takes it a step further with integrated real time, on-site registration (www.faro.com/scene – **Real time on-site registration simulation**), for FARO Focus^S Series Scanner 3D point clouds.

The unique value of SCENE 7.0 can be realized by diverse industries, including architecture, engineering, construction and public safety or any industry where there is a premium placed on capturing/scanning, analyzing and enhancing 3D data.

The Unique Power of Real Time, On-site Registration

Previously, the process of taking an actual scan in the field, transferring that scan to a computer workstation/PC to start using the data was a three-step process. The project 3D scan data was stored on physical SD cards at the project site. Then the user would bring the SD card to the office and physically insert the SD card into a workstation/PC for download. Finally, the scans, once all loaded from the SD cards, would be registered (i.e., logically integrated into a cohesive set of data points on the computer workstation/PC in the office and then the data would finally be ready for use).

SCENE 7.0 supports a seamless, more efficient process. **Real time, on-site registration** enables the 3D scan data, whether it be from a single scan or multiple scans in process simultaneously, to be wirelessly transmitted (i.e., no SD cards needed) directly to an onsite computer workstation/PC in real time. Additionally, the scans are automatically aligned on the workstation/PC computer in real time, in the field. This enables a new set of powerful user benefits unrivaled in the industry:

- **Improved Productivity:** In-office data processing has been dramatically reduced and, in some cases, eliminated altogether. Users come back to the office with a registered product and can get to work immediately. Additionally, the larger the project or the more scans required, the greater the realized efficiencies, in terms of project cycle time and human resources on site.
- **Enhanced Confidence:** FARO Focus^S Series Scanner users are now able to preview scans/projects while still in the field, confirm that all of their project requirements have been accounted for while still in the field and make any necessary adjustments in the field in real time.

"SCENE 7.0 is unquestionably the most advanced software platform of its kind. It significantly elevates the productivity of the FARO Focus^S Series Laser Scanner user well beyond what is available for any hardware and software solution package for cost efficient 3D data capture, processing and analysis," states Joseph Arezone, Chief Commercial Officer. "Real time, on-site registration is a major milestone but just one of the efficiency enhancing features, including "smart" filtering that removes valuable hours from point cloud clean up and drives significant reductions in post processing time."

SCENE 7.0 is now available for ordering.

This press release contains forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995 that are subject to risks and uncertainties, such as statements about demand for and customer acceptance of FARO's products, and FARO's product development and product launches. Statements that are not historical facts or that describe the Company's plans, objectives, projections, expectations, assumptions, strategies, or goals are forward-looking statements. In addition, words such as "is," "will" and similar expressions or discussions of FARO's plans or other intentions identify forward-looking statements. Forward-looking statements are not guarantees of future performance and are subject to various known and unknown risks, uncertainties, and other factors that may cause actual results, performances, or achievements to differ materially from future results, performances, or achievements expressed or implied by such forward-looking statements. Consequently, undue reliance should not be placed on these forward-looking statements.

Factors that could cause actual results to differ materially from what is expressed or forecasted in such forward-looking statements include, but are not limited to:

- *development by others of new or improved products, processes or technologies that make the Company's products less competitive or obsolete;*
- *the Company's inability to maintain its technological advantage by developing new products and enhancing its existing products;*
- *declines or other adverse changes, or lack of improvement, in industries that the Company serves or the domestic and international economies in the regions of the world where the Company operates and other general economic, business, and financial conditions; and*
- *other risks detailed in Part I, Item 1A. Risk Factors in the Company's Annual Report on Form 10-K for the year ended December 31, 2016 and Form 10-Q for the quarter ended March 31, 2017.*

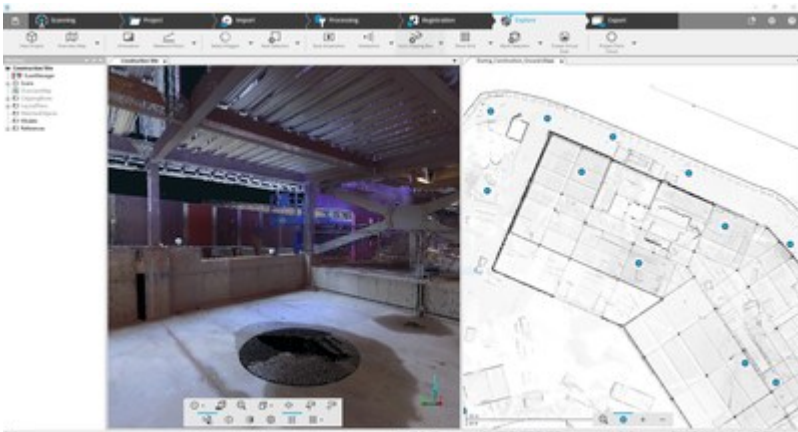

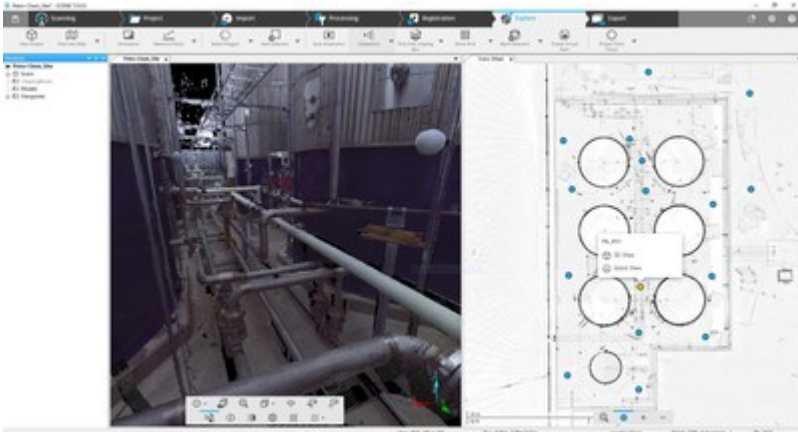

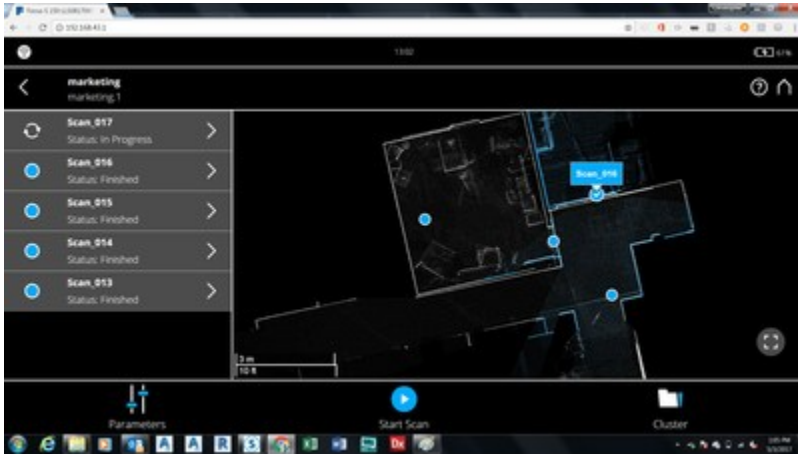

Forward-looking statements in this release represent the Company's judgment as of the date of this release. The Company undertakes no obligation to update publicly any forward-looking statements, whether as a result of new information, future events, or otherwise, unless otherwise required by law.

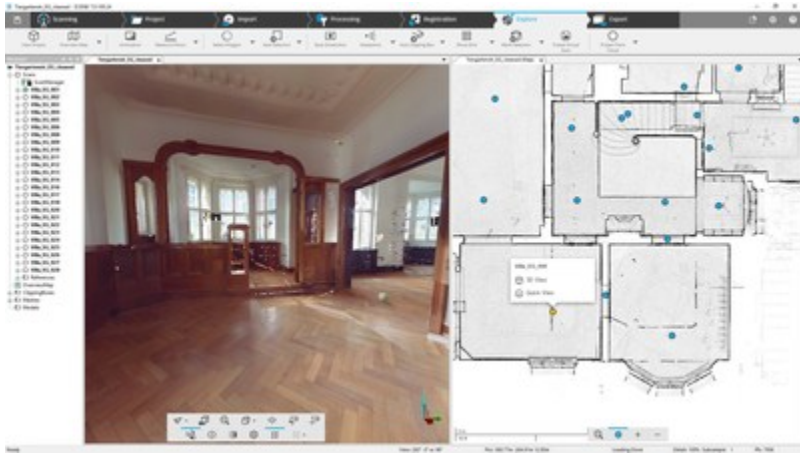

About FARO

FARO is the world's most trusted source for 3D measurement, imaging and realization technology. The Company develops and markets computer-aided measurement and imaging devices and software. Technology from FARO permits high-precision 3D measurement, imaging and comparison of parts and complex structures within production and quality assurance processes. The devices are used for inspecting components and assemblies, rapid prototyping, documenting large volume spaces or structures in 3D, surveying and construction, as well as for investigation and reconstruction of accident sites or crime scenes.

FARO's global headquarters are located in Lake Mary, Florida. The Company also has a technology center and manufacturing facility consisting of approximately 90,400 square feet located in Exton, Pennsylvania containing research and development, manufacturing and service operations of our FARO Laser Tracker™ and FARO Cobalt Array 3D Imager product lines. The Company's European regional headquarters is located in Stuttgart, Germany and its Asia Pacific regional headquarters is located in Singapore. FARO has other offices in the United States, Canada, Mexico, Brazil, Germany, the United Kingdom, France, Spain, Italy, Poland, Turkey, the Netherlands, Switzerland, India, China, Malaysia, Thailand, South Korea, Australia and Japan.
