## **FARO Clinches Technology Innovation Award at Geospatial World Forum 2014**

May 30, 2014

LAKE MARY, Fla., May 30, 2014 /PRNewswire/ -- FARO® Technologies, Inc. (NASDAQ: FARO), the world's most trusted source for 3D measurement technology, received the Geospatial Technology Innovation Award at the Geospatial World Forum 2014 in Geneva on May 8, 2014, Switzerland. FARO clinches the award under the LiDAR 3D Modelling category with its star performer, FARO® Laser Scanner Focus<sup>3D</sup> X 330, a high-speed 3D scanner with extra-long range.

Into its fifth year, the awards ceremony was held during the forum to honor companies and organizations all over the world for their efforts in advancing the geospatial industry. A total of 37 awards were conferred for Application Excellence, Leadership, Policy Implementation, and Technology Innovation.

The judging panel that assessed the entries comprised of academia and experts from the industry – including Prof. Fraser Taylor, Distinguished Research Professor at Carleton University; Aida Opoku Mensah, Director, ICT, Science and Technology Division at the United Nations; Matt O'Connell, President of MOC Partners; Prof. Henk Scholten, CEO of Geodan and Scientific Director of the SPINlab at the Vrije Universiteit Amsterdam; and David Schell, Chairman of the Open Geospatial Consortium.

Of the many unique features that the device possesses, the Focus<sup>3D</sup> X 330 is often lauded for its ultraportable design, ability to scan in direct sunlight, integrated sensors, and extra-long range scanning abilities. The geospatial community consider the Focus<sup>3D</sup> X 330 an ideal tool for a variety of applications, including 3D modeling, as-built documentation, scene-of-crime recording, building surveys, as well as heritage preservation.

Designed with the user in mind, the Focus<sup>3D</sup> X 330 is a high-speed 3D laser scanner for detailed measurement and documentation that surpasses previous models in functionality and performance. The device considerably reduces the effort involved in measuring and post-processing, and also boasts of increased measurement accuracy and better noise reduction.

Offering portability, ease of use and performance all at the same time, the Focus<sup>3D</sup> X 330 keeps FARO in a leading position in the geospatial sector, as the only provider that provides such a technical achievement.

### **About FARO**

FARO is the world's most trusted source for 3D measurement, imaging and realization technology. The Company develops and markets computer-aided measurement and imaging devices and software. Technology from FARO permits high-precision 3D measurement, imaging and comparison of parts and complex structures within production and quality assurance processes. The devices are used for inspecting components and assemblies, production planning, documenting large volume spaces or structures in 3D, surveying and construction, as well as for investigation and reconstruction of accident sites or crime scenes.

Worldwide, approximately 15,000 customers are operating more than 30,000 installations of FARO's systems. The Company's global headquarters is located in Lake Mary, Fla., its European head office in Stuttgart, Germany and its Asia/Pacific head office in Singapore. FARO has branches in Brazil, Mexico, Germany, United Kingdom, France, Spain, Italy, Poland, Netherlands, Turkey, India, China, Singapore, Malaysia, Vietnam, Thailand, South Korea and Japan.
